

COMPARTMENTALIZED BEVERAGE CONTAINER

ABSTRACT OF THE DISCLOSURE

The present invention provides a beverage container having a plurality of compartments so that each compartment may hold a separate beverage or the same beverage, thus providing a consumer to select for consumption the beverage in one of the compartments and preserve the temperature of the beverage in the other compartment for later selection. The compartments may be configured in a vertically separated embodiment or a horizontally separated embodiment. The invention further provides a compartmentalized travel container for prolonged and selective consumption of liquids in order to facilitate heat or cold retention.
